Currently for Dutch companies in High-Tech industry we are looking for qualified mechanical engineers

They base their high service quality on three key concepts: engagement, adaptability and support
ARKEJ Consultancy operates in various business areas, ranging from high tech industries to automotive

Mechanical Design Engineer

Location: Eindhoven, The Netherlands

The function:

As a mechanical engineer you are continuously involved in complex projects. ARKEJ Consultancy offers you a job in a dynamic environment with other (international) professional colleagues. We encourage personal development and reward for their work with an appropriate salary and good working conditions.

As a mechanical engineer you have to develop your design within 3D CAD environment. You are responsible for all necessary detail and assembly drawings and other technical product documentations of your own design. You also have to advice and support clients and colleagues in evaluating structural bottlenecks from concept to completion and perform relevant calculations. In most of the projects you will work within an engineering team. Our employees can work at the offices of our clients and remotely from home along with gaining experience.

Your profile:

Education level

- Bachelor or Master degree in Mechanical/Mechatronic Engineering

Skills and Experience

- At least 2 years work experience in designing of mechanical constructions
- Theoretical and practical experience with precision mechanics is a pre
- Experience in 3D CAD tools (preferably: NX/Unigraphics) is a pre
- Knowledge of FEM is a pre
- Able to set priorities and plan your own work
- Strong analytical ability with a pragmatic attitude
- Flexible and able to work both autonomously and in a dynamic, multidisciplinary team
- Excellent social and communication skills
- Sound command of English (both spoken and written)
- Experience with PLM systems
- International working experience

What do we offer:

We offer a chance for an exciting career development. Together with our experienced colleagues you will work in an informal but professional environment. We cooperate with design and engineering bureaus in The Netherlands providing technical personnel for their clients like: Philips, ASML, DAF, VDL.

We want to cooperate with you as self-employed giving you the chance to build up your own business activity and brand.

Are you interested? Then we'd like to invite you to apply by clicking on the button at the bottom of this application. Upon receiving your CV in English we will contact you.
